

Remain a competitive Defence supplier with PGI

DCC support
for MOD
suppliers and
subcontractors

Our services are designed for organisation that want to strengthen their cyber resilience and position themselves for future certification. We work with:

- SMEs providing training, IT, or non-critical defence services
- Defence technology firms handling sensitive data.
- Defence contractors seeking strategic cyber risk management and MOD alignment.

How can PGI help?

PGI's cyber and information security experts can help you with end-to-end consultancy for your DCC journey through to certification, including:

- **Gap analysis** – Helping you understand which level you need and where you stand today.
- **Official assessment & achieving certification** – Delivering accredited DCC assessments at the required level.
- **Capacity building and training** – We can train your teams for independent cyber risk management.
- **Ongoing support** – We can help you with maintaining compliance and annual reviews.

Why get certified?

It provides assurance that your entire organisation has the right cyber security and resilience in place; not just for one contract, but for all defence business opportunities.

Key benefits include:

- One certification covering multiple MOD contracts.
- Aligned with international cyber security standards.
- Built on Cyber Essentials and Cyber Essentials Plus.
- Valid for 3 years, with annual check-ins.

Why choose PGI?

- We're an accredited Certification Body, recognised by IASME and MOD.
- Our team have 20+ years' of experience in cyber security, including risk management and helping organisations to strengthen resilience.
- We regularly work in sensitive, high-risk environments.
- We offer flexible support for micro, SME, and large organisations, including government and defence contractors
