

ISO/IEC 42001 consultancy

Establishing and implementing a credible AI Management System

The AI landscape is developing rapidly, and governance expectations are catching up. ISO/IEC 42001:2023 is the first international standard for AI Management Systems. It defines how organisations should govern AI responsibly, including controls, risk, oversight and accountability.

We help organisations to build a fully embedded AI Management System designed around their specific risk profile and business context. Our consultants take a hands-on approach to close the gaps between where your AI system is today and where it needs to be to achieve certification.

This service is designed for:

- Organisations looking to build their AI governance from the ground up
- Teams deploying or expanding AI use across the organisation
- Organisations where AI is becoming client-facing

What we help you to implement:

- AI governance policies and procedures
- Risk and impact assessments
- AI development, deployment and monitoring controls
- Third-party risk management
- Roles & responsibilities
- Training and capability building
- Ongoing performance monitoring and continuous improvement

Why choose PGI?

PGI is a specialist digital security and intelligence consultancy with hands-on experience supporting organisations across a range of sectors to build and mature their security management systems.

We work closely with your team to translate the requirements of ISO 42001 into practical controls and processes that reflect how your individual organisation uses AI.

Our consultants bring direct experience of Information Security and AI governance and are qualified with ISO 27001:2022 Lead Auditor, ISO 27001 Lead Implementer, ISO 42001 Implementer certifications.

Our consultants have a wealth of ISO 27001 implementation experience, all of which lends itself towards a deep understanding of ISO commonalities, and transferable skills.
